

STATE OF NEBRASKA  
DEPARTMENT OF ROADS  
ADDENDUM NO. 3  
PROJECT NO. STP-70-4(107)  
CONTROL NO. 42298  
CALL ORDER 400  
N-70, MIDDLE LOUP BRIDGE, ARCADIA  
LETTING DATE: APRIL 16, 2009

The Special Provisions are amended to include the following:

**USE OF DRY RIVER BED FOR CRANE ACCESS**

The Department has received approval from the US Army Corps of Engineers (COE) to allow the use of the dry river bed for the use of staging cranes for the purpose of removing old girders and setting new girders on this project.

If river flows are reduced in the summer months to the point where a significant portion of the river is dry, the Contractor may use the dry sand bed areas (below the ordinary high water mark) to stage cranes. In order to minimize disturbance in the river bed, crane mats shall be used at all places where cranes are to be driven and positioned in the dry river bed. No fill or grading activities will be allowed in the dry river bed areas used to stage crane work activity. If river flows rise and/or high storm water runoff flows are expected following precipitation events, all equipment shall be removed from the river channel until dry stream bed conditions return.

Again, it is emphasized that this approval is only on dry sand river bed and the crossing of shallow water side channels or pools left behind from high water are not allowed to be driven through to establish a staging area.

The Contractor and NDOR shall notify the COE of all activities and dates of when those activities will take place in the dry river channel prior to commencement of those construction activities.

The Contractor must still determine whether the use of an access bridge or the potential use of the dry river channel best fits their circumstance. Based upon this information, the Contractor must bid the item "Access Bridge" according to the provision titled **CONTRACTOR'S ACCESS BRIDGE**.
